GEMS/Water Capacity Development Centre

Capacity Development for Global Water Quality Monitoring

Our Mission

To encourage best practice in water quality monitoring by providing guidance and training on all aspects of water quality monitoring and quality assurance of monitoring activities, and to promote collection of water quality data for submission to the global water quality database GEMStat

Accredited training courses for traditional workshops or in distance learning format on-line

- Ambient water quality monitoring in relation to the Sustainable Development Goal for Water
- Water quality monitoring network design
- Network development and operation
- Field and laboratory monitoring techniques in rivers, lakes and groundwaters
- Quality assurance for water quality monitoring programmes
- Biological methods for surface waters
