NDCs 3.0 Regional Forum for Middle East and North Africa Pathways to Progress: Crafting Ambitious and Implementable NDCs

Date/Location:

- To take place from 23 to 25 September
- In Tunis, Tunisia

Hosted by: Government of Tunisia

Organizers: UNEP, UNDP, NDC Partnership, UN ESCWA in cooperation with UNFCCC Secretariat

Co-Organizers: UNEP-convened Climate and Clean Air Coalition, UN Food Systems Coordination Hub

Background:

The Emissions Gap Report 2023 highlights record-breaking temperatures and warns that current pledges under the Paris Agreement could lead to a 2.5-2.9°C temperature rise above pre-industrial levels this century, emphasizing the urgent need for

increased climate action. As per the 2023 NDC Synthesis Report, although emissions stabilize post-2030, they fail to decline rapidly enough to meet scientific targets outlined by the IPCC in its sixth Assessment Report. The IPCC emphasizes that global greenhouse gas emissions must decrease by 43% by 2030 and 60% by 2035 relative to 2019 levels to align with pathways limiting global warming to 1.5°C. The rapid and targeted reduction of methane and other short-lived non-CO2 pollutant emissions plays a critical role, complementing deep decarbonisation efforts. Only a dual track will enable us to curb the global warming curve fast enough. Cuts in short-lived non-CO2 pollutants, due to their high global warming potential and shorter lifetime in the atmosphere, can reduce 0.5 degrees of warming by 2050.

The inaugural Global Stocktake (GST), agreed as part of the UAE consensus, confirms that the Paris Agreement has galvanized near-universal climate action by establishing goals and signaling the urgency of addressing the climate crisis. The GST assesses collective ambition and progress, identifies critical opportunities to accelerate climate action, and informs the revision of NDCs. Despite progress in mitigation, adaptation, and means of implementation and support, Parties are collectively off-track in achieving the Paris Agreement's purpose and long-term goals.

Parties must enhance ambition and inform their next cycle of NDCs (aka NDCs 3.0), due by 2025, to align with the Paris Agreement's objectives. The upcoming NDCs 3.0, represent a pivotal moment for global efforts, serving as blueprints for a sustainable future. They must be implementable, transparent and unlock finance.

Furthermore, informed by the first GST, new NDCs must drive transformational implementation, unlock finance, enhance resilience, and integrate with national planning and development strategies. They should be backed by concrete policy roadmaps, financing plans, and demonstrate how countries will address climate change while seizing opportunities for growth and change across various sectors. Alignment with longer-term objectives, needed sectoral transformations, just transition

Co-organized with:

principles, and substantial acceleration of cuts in greenhouse gas emissions, including in methane and other non-CO2 pollutant emissions by 2030, will be essential. The GST also stressed the importance of addressing the climate and biodiversity crises jointly, as conserving, protecting and restoring nature and ecosystems are key towards achieving the Paris Agreement temperature goal.

As countries in the Middle East and North Africa prepare for the next round of NDCs, there's a unique opportunity to elevate climate strategies toward higher ambition, leveraging lessons from previous implementation efforts. The rapid development of renewable energy technologies, energy efficiency solutions, and climate-resilient infrastructure provides MENA countries with new tools to meet their climate goals more effectively and affordably. Additionally, many MENA countries, traditionally dependent on oil and gas revenues, are increasingly recognizing the economic benefits of diversifying their economies. Investing in green technologies and sustainable industries can create jobs, stimulate economic growth, and reduce reliance on fossil fuels. Thus, the new cycle of NDCs with the whole of society approach and economy wide targets will be a window of opportunity. This Forum will explore how COP28 outcomes, particularly the GST decision, can guide national processes to strengthen ambition in future NDC and contribute to sustainable development by addressing climate mitigation and adaptation jointly. Through peer-learning and exchange, countries in the region will discuss best practices, challenges, and opportunities, accelerating the adoption of solutions and innovative financing models. Tools and guidance will be made available to support the inclusion of specific measures and targets into NDC reviews.

Co-organized with:

Technical government officials, UN agencies, and partner organizations will collaborate in this Forum to harness collective technical and financial capabilities, supporting countries in crafting their new NDCs effectively. Additionally, the workshop will spotlight regional and international collaboration opportunities, enabling coordinated efforts while considering national circumstances in NDC preparation.

Objectives:

- Discuss how the outcomes of the GST adopted during COP28 can increase ambition in the NDCs 3.0 and LT-LEDs.
- Identify and discuss potential challenges and opportunities and good practices in integrating the outcomes of the GST, The Paris Agreement Ambition Cycle and the Enhanced Transparency Framework (ETF), as well as economy-wide or sector-focused emission reductions, including methane and other short lived non-CO2 pollutants, in the preparation of the NDCs 3.0.
- Discuss support available and needed for NDCs 3.0 preparation.
- Identify and discuss the opportunities for NDCs 3.0 to drive integration with other policies and instruments.
- Show opportunities to use the NDC update to strengthen delivery of the other Rio Conventions, including Biodiversity, Climate Change and Desertification.
- Identify synergies and entry-points for climate finance to support the acceleration of implementation of the NDCs.
- Explore how to ensure NDCs 3.0 unlock finance

11h10- 12h10 (60 mins – One Round)

This session will have 3 breakout tables, each table will last 60 minutes.

There will be a total of three rotations.

Each table will be organized around up to 3 guiding questions. Each round of discussion will be kicked off by the

Breakout Group Discussion on lessons learned from current NDCs:

Objectives of the session:

The breakout group discussion sessions will provide an opportunity to participants to reflect and exchange on lessons learned from the previous round of NDC preparation and implementation and share what has worked well and what needs to be improved in the upcoming round of NDCs with reference to the specific thematic areas.

By the end of the session, participants will have a good understanding of key challenges from the previous round of NDCs and areas of opportunity for the development of the next round.

Panel Discussion: Best Practices in Sectoral Opportunities (max 4/5 speakers):

In this panel discussion, country representatives will share from their experience good practices, challenges and opportunities on integrating various sectoral opportunities and policies that can be applied to the development of NDCs 3.0. Countries will share various considerations and approaches when integrating new sectors into NDCs and for enhancing the ambition in existing sectors in NDCs.
