IRIS: 17

FDES -
Framework for the
Development of Environment
Statistics

SEEA -
System of Environmental-
Economic Accounting

IRIS -
International
Recommendations for Energy
Statistics

Non-relevant indicators and statistics

Conclusions

- The linkages of the Global Set of climate change statistics and indicators with important policies such as the Paris Agreement, the 2030 Agenda and the Sendai Framework for Disaster Risk Reduction:
 - ✓ promote awareness at the national, regional and global levels and
 - ✓ build a bridge between statisticians and policy makers, national statistical offices and different relevant ministries
- Links of the Global Set of climate change statistics and indicators to various statistical frameworks provide synergy within statistical offices, allowing the use of existing statistics and data on environment, energy, and others
