JOINT FAO/WHO FOOD CONTAMINATION MONITORING PROGRAMME

Summary of 1980-1981 Monitoring Data Received
from the Collaborating Centres

	<u>page</u>
Foreword	i
Summary of data on contaminants in individual foods	
1. Listed by contaminant	1
2. Listed by food group	55
3. Listed by country	95
Summary of Contaminants in the Daily Diet	135
Annex 1 - Forms and instructions used in collecting monitoring data	155
Annex 2 - List of Collaborating Centres	161

The issue of this document does not constitute formal publication. It should not be reviewed, abstracted or quoted without the agreement of the United Nations Environment Programme, the Food and Agriculture Organization of the United Nations or the World Health Organization.

FOREWORD

This document contains 1980-1981 data received from the Joint FAO/WHO Collaborating Centres for Food Contamination Monitoring on a number of contaminants in selected foods as well as in the daily diet. The contaminants include certain organochlorine and organo-phosphorus pesticides, polychlorinated biphenyls (PCBs), cadmium, lead and aflatoxins. Forms and instructions used for the collection of the monitoring data are given in Annex 1 and the list of Joint FAO/WHO Collaborating Centres for Food Contamination Monitoring participating in the Programme is given in Annex 2. .

The data on the contaminants found in individual foods are listed by (i) contaminant, (ii) food group and (iii) country. This is followed by a summary of the data on certain contaminants found in the daily diet.

An explanation of some of the terms and abbreviations used in this document are given below. In the Sections dealing with contaminants in individual foods, under the heading "YEAR", the year shown is the latest year that samples were investigated. For example, if the foods were collected in the period from March 1980 to November 1981, the year shown is 1981. Under the heading "FOOD ORIG.", meaning food origin, the abbreviation "DOM" means that the food was domestically produced while "IMP" denotes an imported product. The heading "PART CTRY" is intended to provide an indication as to whether the food being analyzed is representative of only part of the country or of the whole country. "MEAS. BASIS", meaning measurement basis, provides information on whether the results of the analysis of the food are expressed on an "as is" basis, on the "fat" content, on the "dry" weight or is not known (UNKN). Under the heading "DET LIMIT (UG/KG)", information is provided on the detection limit for the contaminant in the food expressed in micrograms per kilogram. The expression "90th(UG/KG)" or "90TH PERC.(UG/KG)" means the 90th percentile reported in micrograms per kilogram of food. The figure 0.00 in the median or 90th percentile columns means that the contaminant was not detected in the food. If a blank space appears it means that no information was provided by the Collaborating Centre.

For the Section dealing with the daily dietary intake of certain contaminants, some explanations should also be given. Under the heading "TYPE TOTAL DIET", three major alternatives were provided for as indicated in Annex 1: (i) composite food groups - giving the number of food groups, (ii) major food items coupled with amounts consumed and (iii) sample meals. In the column headed "NO. OF FOODS (BEVERAGES)", the total number of food items making up the diet is indicated. If the word (NO) appears it implies that no beverages were included in the dietary intake. If the word (YES) appears, the explanation for the various countries is as follows:

Australia: beverages for the adult diet include coffee, tea and alcoholic drinks; for infants and children the diet did not include any beverages

Guatemala: beverages include coffee, tea, soft drinks and drinking water

Hungary: beverages include coffee, tea and soft drinks

Japan: beverages include coffee, tea, soft drinks, drinking water, and alcoholic drinks. The 2000g daily consumption of total diet includes 600 ml of drinking water per se.

United Kingdom: for the contaminants cadmium and lead, the beverages included coffee, tea and soft drinks, while for the contaminant aflatoxin M₁, only drinking water was included since it dealt with infants' diet.

USA: beverages include coffee, tea, soft drinks and drinking water.

SUMMARY OF DATA ON RESIDUES OF ALDRIN + DIELDRIN

ANNEX 1

JOINT FAO/WHO FOOD CONTAMINATION MONITORING PROGRAMME

Food Contaminant Data Form Instructions

The data form consists of a white (top) and a blue (bottom) copy. Insert a sheet of carbon paper between these, fill in all the blanks following the instructions given below, retain the blue copies and send the white copies to the following address:

Environmental Hazards and Food Protection
Division of Environmental Health
World Health Organization
1211 Geneva 27
Switzerland

Each data form carries a unique serial number which is the same on both the white and blue copies. Prepare the data forms maintaining this sequence of numbers. The date of submission is provided for your record purposes but will not appear on the collected computerized record.

* * * * *

1. COLLABORATING CENTRE: - give the name of the country only.
2. NUMBER OF PARTICIPATING LABORATORIES: - give number of laboratories from which the data have been collected for the food-contaminant reported.
3. FOOD DESCRIPTION: - description of the food sample analyzed should be given as clearly but as succinctly as possible. Information on the identity, processing such as cooked/uncooked, dried, etc., packaging such as in tin cans with or without lead solder, plastic, glass, etc., or any other aspect which could influence interpretation of the results should be given.
- use food descriptions which were included in Phase II of this programme; these have been listed in the enclosed document.
- data collected from sampling and analysis of suspect food should not be submitted.
4. SAMPLING PERIOD: - give the time period during which the samples were collected; do not give dates for analyses.
5. FOOD ORIGIN: - indicate if the food was produced within the country or imported or both; if imported give the country of origin if known or enter unknown.
6. SAMPLES REPRESENT: - indicate whether samples are representative of that food in the whole country or only part of country.

ANNEX 1 continued

7. CONTAMINANT: - use a separate data form for each contaminant. Data are requested for the following contaminants:
- DDT-COMPLEX
TOTAL HCH-ISOMERS
GAMMA-HCH
HEPTACHLOR + BETA-HEPTACHLOREPOXIDE
ALDRIN + DIELDRIN
HCB (hexachlorobenzene)
MALATHION
PARATHION
METHYL-PARATHION
DIAZINON
PCBS (polychlorinated biphenyls)
LEAD
CADMIUM
AFLATOXINS (if separately: B₁, B₂, G₁, G₂, M₁)
ALL ORGANOCHLORINE COMPOUNDS studied in human milk
8. DETECTION LIMIT: - give the value in µg/kg for the food-contaminant method used; this should be compatible with item 1
9. NUMBER OF SAMPLES: - give number of samples analyzed on which the median and 90th percentile values are based.
Do not report values on less than 10 samples.
10. RESULTS BASED ON: - indicate if the results given are for analyses of samples on a "fat content" basis, on a "dry weight" basis, or on an "as is" basis.
- results on human milk should be given on an "as is" basis but those for milk and dairy products should be given on a "fat content" basis.
11. MEDIAN VALUE FOUND: - give the value in µg/kg to two significant figures
If this value is less than the detection limit, indicate how it was obtained.
12. 90TH PERCENTILE VALUE: - give the value in µg/kg to two significant figures
13. ANALYTICAL METHOD: - give the complete literature reference, including the title of the paper, if it has been published.
If the method has not been published, attach a copy to the data sheet.
14. RELIABILITY DETERMINED: - indicate how these analyses are checked for accuracy and precision.
15. RESULTS PUBLICATION: - if the results being reported have been or will be published, give the complete literature reference, including the title of the article.
16. REMARKS: - give any additional information on the samples or the results which cannot be clearly given in items 1 through 12.

JOINT FAO/WHO FOOD CONTAMINATION MONITORING PROGRAMME

Total Dietary Intake of Contaminants Data Form-Instructions

The data form consists of a white (top) and a blue (bottom) copy. Insert a sheet of carbon paper between these, fill in all the blanks following the instructions given below, retain the blue copies and send the white copies to the following address:

Environmental Hazards and Food Protection
Division of Environmental Health
World Health Organization
1211 Geneva 27
Switzerland

Each data form carries a unique serial number which is the same on both the white and the blue copies. Prepare the data forms maintaining this sequence of numbers. The date of submission is provided for your record but will not appear on the collected computerized record.

* * * * *

1. COLLABORATING CENTRE: - give the name of the country only.
2. SAMPLING PERIOD: - give the time period during which the samples were collected, do not give the dates for the analyses.
3. TYPE OF TOTAL DIET: - check only one of the four types given:
 - 1 - food items may be grouped into composites (for example, grains & cereals, vegetables, meat, fish & eggs, dairy products, etc.) which are then analyzed and the results together with information on the amounts consumed used to calculate intakes. If this type is used also enter the number of composites.
 - 2 - food items of major dietary importance (for example rice, corn, fish, milk, etc.) may be separately analyzed and the results together with information on the amounts consumed used to calculate intakes. If this type is used the number of food items should be entered in item 4.
 - 3 - food items may be grouped as sample meals which duplicate those consumed or samples duplicating meals consumed may be taken from individual, group, or institutional kitchens. If this type is used also describe the meal briefly in item 15.
 - 4 - if the type of total diet used is other than one of the above, describe it briefly in item 15.

ANNEX 1 continued

4. TOTAL NUMBER OF FOOD ITEMS: - indicate the total number of individual food items include in the total diet, in composites, as major foods, or in sample meals.
5. BEVERAGES INCLUDED: - indicate the types of drinks which are included but leave blank if none are included.
6. PREPARATION OF TOTAL DIET: - indicate if the total diet as prepared for eating, is cooked, uncooked or both before analysis.
7. DESCRIPTIONS OF PERSONS CONSUMING DIET: - include any available information on the group of persons consuming or assumed to consume the total diet, for example, ages, sexes, body weights, location in rural or urban areas, if members of special groups or tribes, etc., and any other items which are deemed important.
8. DAILY CONSUMPTION OF DIET: - give the total weight of diet consumed by a person in a day in grams.
9. CONTAMINANT: - use a separate data form for each contaminant. The following are contaminants for which data are requested:
DDT-COMPLEX
TOTAL HCH-ISOMERS
GAMMA-HCH
HEPTACHLOR + BETA-HEPTACHLOREPOXIDE
ALDRIN + DIELDRIN
HCB (hexachlorobenzene)
MALATHION
PARATHION
METHYL-PARATHION
DIAZINON
PCBS (polychlorinated biphenyls)
LEAD
CADMIUM
AFLATOXINS (if separately: B₁, B₂, G₁, G₂, M₁)
10. NUMBER OF TOTAL DIETS ANALYZED: - give the number of samples analyzed on which the median and 90th percentile or the mean are based.
11. MEDIAN CONTAMINANT INTAKE: - give the value in µg/person/day to two (2) significant figures.
12. 90TH PERCENTILE CONTAMINANT INTAKE: - give the value in µg/person/day to two (2) significant figures.
13. MEAN CONTAMINANT INTAKE: - if the results are calculated in terms of the arithmetical mean, give the value in µg/person/day to two (2) significant figures.
14. PUBLISHED RESULTS: - if the reported data are or will be published, give the complete reference including the title; if only a national report is available, attach a copy if possible.
15. REMARKS ON DIET SAMPLES OR RESULTS: - give any additional information not possible to enter in items 1 through 13.
