THE UPPER GULF OF CALIFORNIA AND CEDO

KEY GENDER-RELATED OUTPUTS AND OUTCOMES OF THE CMSP PROGRAM

Technically sound proposals were developed for the integrated management of coastal fisheries in the **Puerto Peñasco-Puerto Lobos Corridor with the consensus of 75% of the fisher households** and presented to the government for implementation.

These proposals included tools for regularizing the fishing effort, establishing **a network of fishery refuge zones**, defining **exclusive local areas for managing benthic species** and **setting of catch quotas for vulnerable species**.

The **proposals were validated by artisanal fisher communities, wetland users, sport fishers, CEDO's technical group and participating authorities.**

PROJECT STRUCTURE

2758 women and men, who were previously excluded from coastal and marine planning and permitting processes, **participated** in **46 trainings** and **116 workshops** on the CMSP program and elected representatives to the **Intercommunity Fishers Groups (IFG)**.

Proceso Corredor. Desemboque de Caborca. Archivo CEDO, 2016.

Formation of an **Intercommunity Fishers Groups** (IFG) with **45 representatives**, including **8 women leaders**, to represent the diverse small scale fisheries in all regional planning processes of the CMSP.

Proceso Corredor. Reunión de miembros del GIR en Puerto Peñasco. Archivo CEDO, 2017.

Formation of **9 cooperatives** (with **80 men** and **38 women** members) from five coastal wetlands to address the needs of artisanal fishers in the context of oyster aquaculture and wetland conservation.

Proceso Corredor. Reunión de miembros del GIR en Rodolfo Campodónico. Archivo CEDO, 2017.

Formation of the **first women-led federation in Mexico**, from the **Desemboque community**, representing seven fishing cooperatives.

The members secured fishing permits for women fishers and were elected as representatives of the IFG.

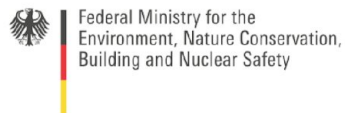

Proceso Corredor. Autoridades, mujeres de la Federación Roca Fuerte del Desemboque y staff de CEDO. Archivo CEDO, 2017.

Through the process, **both women and men from small-scale, “traditional,” and artisanal fisheries acquired official fishing permits, including 16 permits for women fishers**, which strengthened their fishing tenure rights, reduced social-spatial conflicts, and increased local stewardship for 11 small-scale fisheries.
